

Git Hand-On 05: Clean Up and Push to Remote

Objectives

- Learn how to clean up the local Git state.
- Push pending changes back to the remote repository.

What You Will Learn

- Verify the current branch state.
- Pull the latest remote changes.
- Push local changes to the remote repository.

Prerequisites

- A repository with local and remote branches.
- The remote repository should already be configured.

Steps

1. Check repository status

```
git status
```

```
git branch
```

2. Pull latest changes from remote

```
git pull origin master
```

3. Push local changes

```
git push origin master
```

4. Verify in the remote repository

Open the GitHub or GitLab repository page and confirm that the latest changes are visible.

Summary

You verified the repository state, pulled the latest updates, and pushed your changes to the remote repository.
